HELPY

Helpy is a medical guide application capable to remember the most complex terms for healthcare staff.

CHALLENGE

Healthcare staff is always challenged to keep thousands of complicated terms in mind. That's what terrified our client who has decided to create a medical handbook that will store all the medical terms, disorders overview, drug description, and treatment methods in one place.

SOLUTIONS

- design concept

first we've thought through the design concept to make an app look good. Then we've made evaluations on how to ensure the fastest functionality bearing in mind the load that an app will experience while conducting such a challenging and delicate searching.

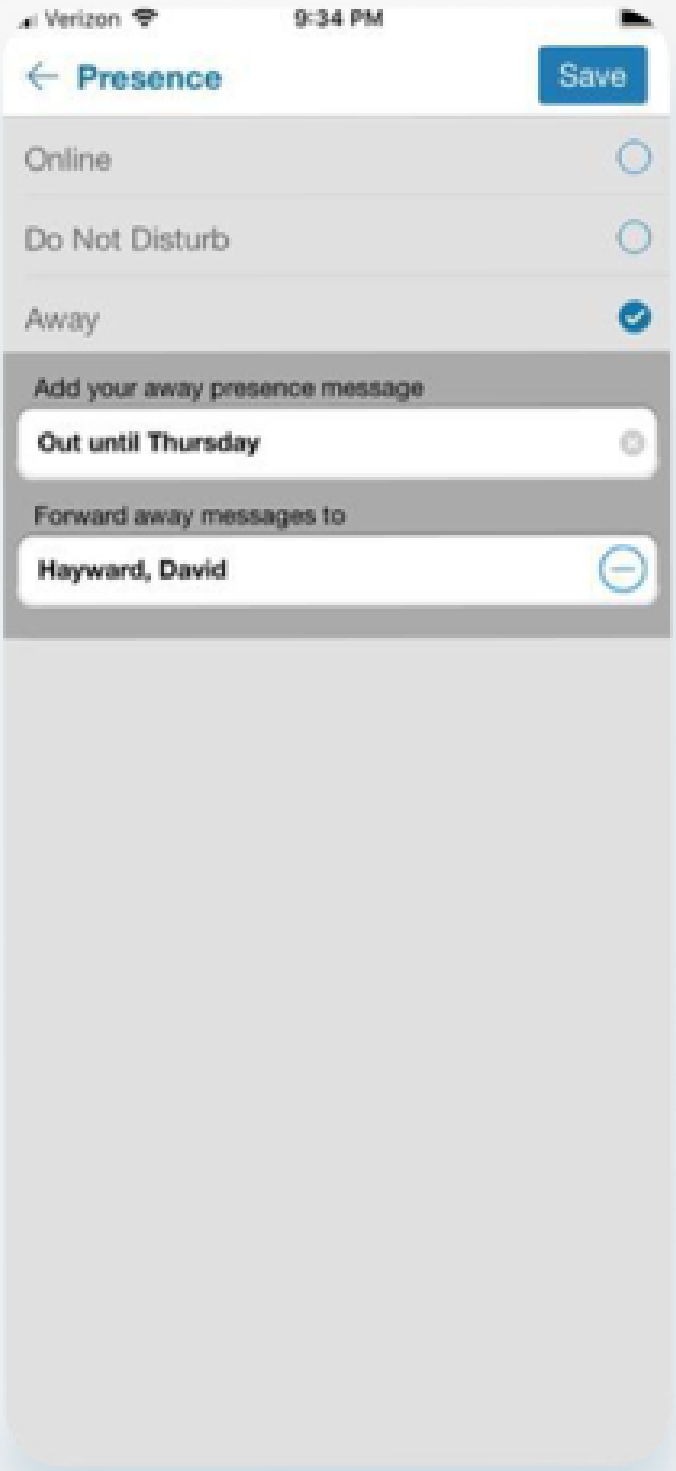

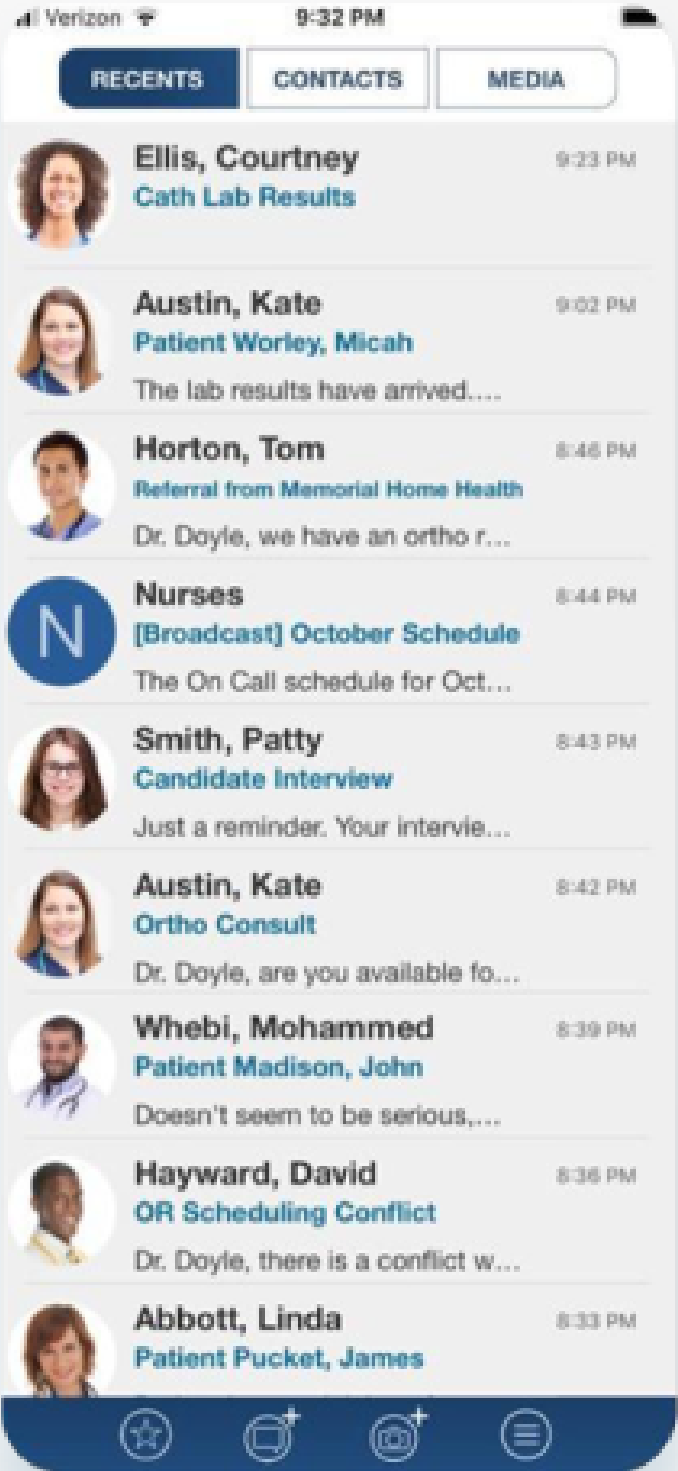

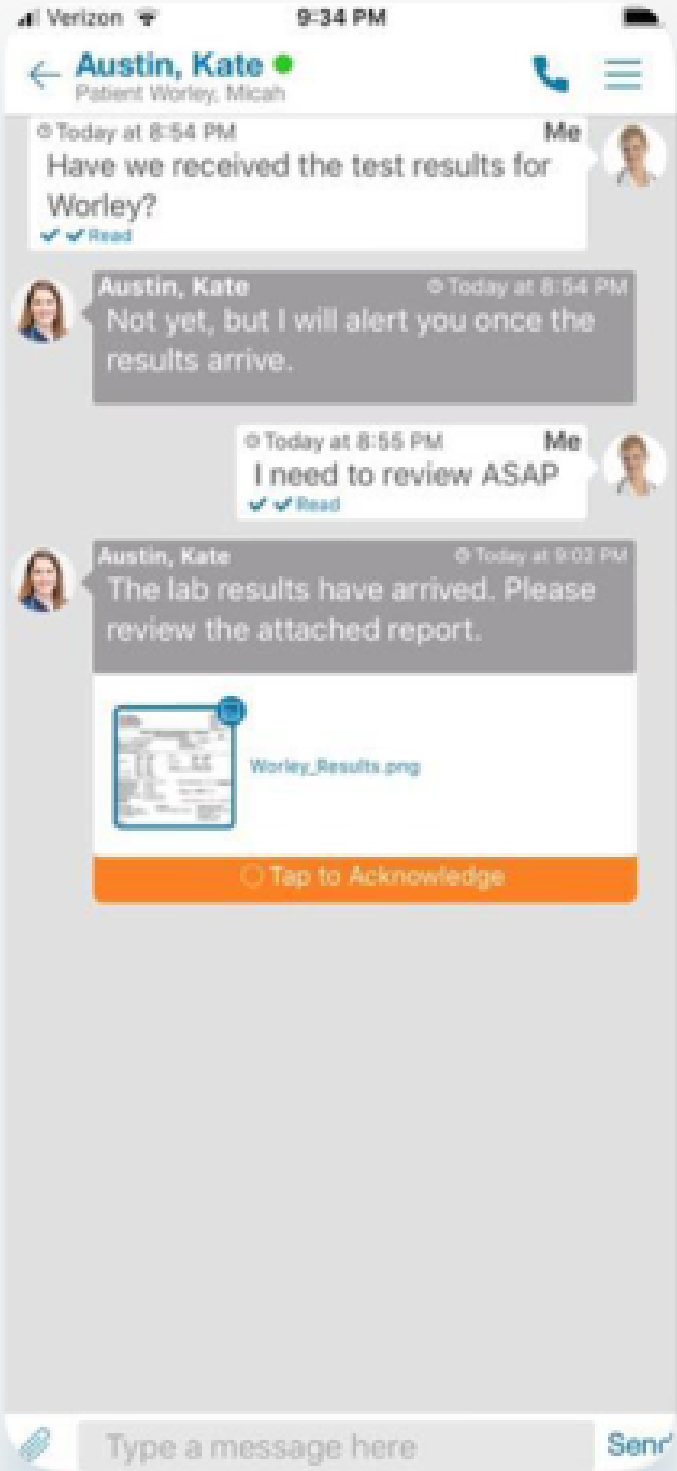

- quick search

Medical professionals may search through thousands of complex records with key terms to define the most accurate diagnosis and effective therapy.

- advanced filters

Therapists can adjust search results eliminating certain data based on location, therapy approaches, health insurance providers, allergies, etc.

QLIQ

Qliq is a powerful communication platform that bridges the gap between healthcare providers and patients. There is an extended set of features like secure texting, files exchange, on-call scheduling, virtual visits, visit path, and chatbot platform. It all contributes to efficient clinicians teamwork, enhanced patient engagement, and better health outcomes.

CHALLENGE

The client was in need of additional hands to implement the application for Apple iOS-based devices. Our task was not only to provide tech expertise and development services but cooperate efficiently with the developers' team of the ordering party.

SOLUTIONS

- Secure Messaging

Patients' data is fully protected and, at the same time, shared within the care team to ensure accurate information exchange and improved patient outcomes.

- On-Call Scheduling

A real-time view of calendar records with the information of who is on duty at the specified time in any particular department. All data can be easily managed to allocate the required staff for specific needs and contact them instantly.

- Visit Path

A real-time overview of the scheduled, conducted, and completed care delivery sessions with GPS-tracking and accurate reporting to optimize service shipment and billing procedures.
